

Claims

1. An extendible and flexible heat dissipation air conduit base as computer heat dissipation device, comprising an air conduit and fixtures characterized in that:
5 said air conduit is hollow and flexible with said fixtures at two ends for positioning and securing, each said fixture is rectangle and has a circular hole in a center, there are also several positioning holes and through holes; thus, during installation said two fixtures connect to a CPU fan and heat dissipation fan on a computer case to provide an excellent heat dissipation
10 channel and effect for computers.
2. The extendible and flexible heat dissipation air conduit base as computer heat dissipation device of Claim 1, wherein said fixtures have several through holes in a middle section at four perimeters to facilitate reversed U
15 metal wire to pass through, so said air conduit can tightly connect to fixtures.
3. The extendible and flexible heat dissipation air conduit base as computer heat dissipation device of Claim 1, wherein at each corner of said fixture there are two sets of irradiating positioning holes, said irradiating
20 positioning holes are used as specifications to fit different sizes of CPU fans and to provide installation flexibility.
4. The extendible and flexible heat dissipation air conduit base as computer heat dissipation device of Claim 1, wherein said CPU fan and heat dissipation fan on said computer case connecting to said air conduit can be

both air discharging or both air sucking.
